## SUMMARY

Software engineer from Georgia Tech Full-Stack Bootcamp with a diverse array of skills, interests, and experience. Hands-on experience developing full-stack web applications. Designed and built a personal computer to optimize performance in software development, gaming, and content creation. Lead projects by effectively planning and assigning tasks to teammates. Devoted to continued learning and improvement.

## PROJECTS

Kitchen Inventory (in progress) — Inventory management system developed to aid a local elementary school transition from paper inventory to electronic, which utilizes the user's phone as a barcode scanner and stores data using MongoDB
